

'Software tools for Triage of the Acute Radiation Syndrome:
a practical workshop'

StTARS 2021

16th - 19th November 2021

at REAC/TS in Oak Ridge, Tennessee, USA

- Learning about **purpose and function of software tools** developed by scientific groups within NATO
- These tools either allow an integrated **estimation of dose** (BAT, WinFRAT), or the **prediction of ARS** severity based on changes in blood cell counts (H-module) in the first days after radiation exposure
- Introduction into these tools primarily by those who developed them, so that you will receive first hand tuition about their strengths and limitations
- Insight into **diagnostic and therapeutic strategies** that are currently under development
- Practice on diagnostic skills using **real case histories**, e.g. from the Chernobyl incident
